This video is about making a simple 220v led bulb without using a transformer. The number of LEDs can be increased by connecting in series. To increase. This is the schematic diagram of LED indicator for 220V AC Mains, which can be used to indicate that the cable lines are connected to 220v electrical installations.

You can use a LED at 220V by having a capacitor in series in order to limit the current and prevent the LED from being damaged if the circuit is turned on when the AC is applied.
